ABOUT ME

Mecathronics enginner with three years of experience in software. I worked as a intern in a backend developer and embedded developer. Since last year, I am a junior developer in the languages of C, C# and Kotlin, and also in a software developer support that helps developers from all Latin America.

WORK EXPERIENCE

Junior Software Developer

Venturus [Jul 2021 – Current]

City: São Paulo

Country: Brazil

Partnership between the company Venturus and the multinational Ingenico, which is a company specialized in payment services, one of the world leaders in the market of payment terminals.

Activities:

- Developing POS embedded sample applications using the C language for demonstration to customers. The application was intended to support analysis of customer issues and to be samples for customers.
- Development of a C# desktop application to run in an industrial environmentThe application used PCL to communicate with the terminals and be able to collect logs and status.
- Development POS embedded sample application in Android enviroment using Kotlin and MVVM. The application was a sample of comunications to the Latin America customers of Ingenico.
- Analises of code, logs and debug of application from all Latin America.

Achievements:

- Contributed to solving software problems throughout Latin America. The software developed helped customers and contributed to the production of terminals throughout Latin America.

Tools used: Visual Studio, Git, Jira, GitLab, Android Studio.

Intern embedded software developer

Dinamo Networks [Oct 2020 – Jun 2021]

City: Brasília

Country: Brazil

Hardware security machine (HSM) company operating in hospitals and banks, such as the Central Bank of Brazil.

Activities:

- Development of test Jiga for testing PCB of HSM supervisor system.
- Software development using BASH Script in Linux CentOS, and Raspberry PI.
- Contact with cryptography concepts, such as: private and public keys.

Achievements:

- Test Jiga reduced PCB production time from weeks to days

Intern backend developer

Grupo ICTS [Aug 2019 – Sep 2020]

Technology company that works in R&D projects and software development. This project is a product that translate words into the Portuguese sign language used in government agencies.

Activities:

- API Rest implemented in JAVA using frameworks Hibernate and spring boot.
- Constructing of a database using SQL.
- The API is a part of a bigger software, and was developed using MVC architecture.

Achievements:

- The API provided all the word properties to facilitate the translation of the word into Portuguese sign language.

EDUCATION AND TRAINING

Mechatronics Engineering

University of Brasilia [Mar 2015 – Dec 2021]

Address: Campus Universitário Darcy Ribeiro, Brasília-DF, 70910-900 Brasília (Brazil)

https://international.unb.br/

- Classes in the field of software, control, electronics, and mechanics.
- Participation in BAJA SAE team with a development of a embedded eletronic in a off-road car. The team went to a national competition.
- Participation in a mechatronics junior enterprise with development of automation projects and acting in project management.

Thesis: Software to annotate 360-degree videos.

- The project had participants from University of Brasília and the University of Texas at Dallas.
- The software was developed in python with OpenCV. It was used by 9 people in an experiment with significant reduction of annotation time from hours to minutes.

LANGUAGE SKILLS

Mother tongue(s): **Portuguese**

Other language(s): **English - C1**

DIGITAL SKILLS

My Digital Skills

Programing languages: C, C#, Java, Python, Kotlin, C++
